Please do not approve more than the minimum fossil fuel driven capacity that's needed.  
We need renewable energy now, to move forward, not going back in time with fossil fuels.

Thank you.

Hello,

I am writing to voice my opinion against the fast-tracking of the proposed new gas-fired Asheville Duke Energy plant. My understanding is that this project is being rushed through without thorough technical review, particularly in light of new research showing that methane emissions from the gas industry are at least 1.5 times previous EPA estimates. Also, my understanding is that the power to be supplied by the proposed plant is far in excess of current needs in the area.

Thank you

Jonathan D. Karr
