Hello NC Utility Commissioners, I am writing in reference to the Smart Meters which were installed on September 7, 2018, where I live in Asheville. I write to you on behalf of those people who own their own homes. Because I am in an apartment complex, and on my bedroom exterior wall there are 6 Smart Meters, I believe I am "trapped" with the Smart Meters. One is for my own apartment, and one each for 5 other apartments! I say "trapped" because I am in an apartment complex that has some subsidized rent, and I do not have the option of moving to a "retail" price apartment in Asheville. Since the installation I am experiencing health issues, some of which are extreme fatigue, headaches, inability to sleep through the night, nervousness, terrible joint pain, and high anxiety because of the way I am feeling physically. These began immediately upon installation. My new grandson of 7 weeks will be visiting with me soon, and I am totally uncomfortable having him stay in my apartment, wondering how a child of this age will be affected by the Smart Meters. Please consider keeping an opt-out program available at all times. Also, it would be very helpful to not have to have a medical doctor's letter signed by a notary. Please offer an analog meter option. There are countless people who really, truly, are sickened by the constant pulsation of the Smart Meters. Thank you for taking the time to read this letter. Sincerely, Lisa Guillory

Threatt, Linnetta

E2, Sub 834 Install Smart meters in western NC

Message

Dear Utilities Commission, I am opting out of having a smart meter installed at my home for the following health related reasons: 1) There is well researched and documented evidence by Dr. Ronald Powell that smart meters can cause cancer, loss of sleep, increase of anxiety, heart attacks, joint pain, heart palpitations, nerve pain.) A National Toxicology animal study of cell phones showed "clear evidence" of increased risk. Duke's smart meters put out the same type radiation as cell phones. 3) I have two gene mutations as diagnosed by my medical doctor sending a mouth swab to a genetic testing lab. These two mutations are AP0E-4 for both heart disease and Alzheimers. My mother, her father, her brother, her nephew all died from heart attacks. 4) The second gene mutation is MTHFR which controls the biochemical process of methylation, a major process that turns one substance into another which the body can use appropriately. This puts me at high risk of multiple and life threatening food allergies, lowered inability to rid my body of environmental toxins, anxiety, depression, and early death. My weight has dropped from an appropriate 115 lbs. to 90 lbs. I am physically weak, and diagnosed with Myofascial Pain Syndrome. I want to live as long as I can. Thus, I cannot allow a smart meter to be installed at my house. Susan I. Hunt
