Please accepted this as a statement of our support for expansion of the RNC program into the Charlotte market. As one of the existing program's top participants and potentially a top participant in the Charlotte market, we request that you reconsider this expansion. This program allows us the opportunity to build better, more sustainable and energy efficient homes, without having to pass that cost along to our customers. I have been involved in Building Science for over 19 years and although buyers want more sustainable / efficient homes, very few are willing to pay for it. This program helps us bridge that gap and allows us to provide a better home while reducing power usage in the Raleigh market. Please reconsider this expansion into the Charlotte market so that we can do the same there.

As a ratepayer and building industry professional, I cannot stress enough how much Duke Energy Progress' Residential New Construction Program has done to promote efficiency, save money, and reduce greenhouse gases in that territory. The incentive has produced quantifiable savings and our industry has seen firsthand more savings in the Progress territory, where the incentive has been in place for several years, versus the Carolinas territory where it is not available. Having the incentive available in the Carolinas territory would be good for residents of our state. I am asking the Commission to weigh in on Docket No E-7 Sub 1155 by directing Duke Energy and gas utility industry stakeholders to come up with a solution that will allow this incentive to be available for Duke Energy Carolinas customers. Thank you.

Duke Energy should extend its Residential New Construction Incentive now available in Duke Energy Progress territory to Duke Energy Carolina territory. Also the Commission should require both programs to institute a requirement that Duke actually measures the kWh of energy savings in the buildings that use the program instead of relying on the antiquated M&V after the fact estimates of energy savings.

Duke Energy Progress' Residential New Construction Program has been instrumental in saving energy, money, and reducing greenhouse gases in the Progress Territory. The incentive has successfully encouraged and motivated many contractors to build more energy efficient homes when they wouldn't have otherwise. I am asking the Commission to weigh in on Docket No E-7 Sub 1155 by directing Duke Energy and gas utility industry stakeholders to come up with a solution that will allow this incentive to be available for all Duke Energy Carolinas customers. Thank you.

To whom it may concern: As a ratepayer and building industry professional, I have witnessed firsthand just how much Duke Energy Progress' Residential New Construction Program has done to promote efficiency, save money, and reduce greenhouse gases in that territory. The Duke Energy Progress residential incentive has been a job creating policy success. The incentive has produced quantifiable savings and our industry has seen firsthand more savings in the Progress territory, where the incentive has been in place for several years, versus the Duke Energy Carolinas territory where it is not available. Having the incentive available in the Duke Energy Carolinas territory would be absolutely GREAT for residents of our state. I am asking the Commission to weigh in on Docket No E-7 Sub 1155 by directing Duke Energy and gas utility industry stakeholders to come up with a solution that will allow this incentive to be available for Duke Energy Carolinas customers as soon as possible. Thank you.

As an Geothermal Industry Professional working with North Carolina HVAC contractors and builders, I cannot stress enough how important utility programs help promote energy efficiency, save money, reduce carbon and other greenhouse gasses in other areas I manage. Maryland has had over a decade of utility based programs which helps home buyers invest wisely in energy efficient homes. The adoption rate for geothermal technology in Maryland far exceeds that of North Carolina. Having similar backing by Duke Energy in North Carolina would be good for residents of North Carolina. I am asking the Commission to weigh in on Docket No. E-7 Sub 1155 by directing Duke Energy and gas utility industry stakeholders to come up with a solution that will allow this incentive to be available for Duke Energy customers in North Carolina.

As a member of Southern Energy Management- we have seen huge success in helping builders with the Duke Progress RNC program. We've made our builders \$11 million + in incentives since the birth of the program. We've had a huge deal of interest from the large national builders in Duke Carolina's territory and see a GIANT opportunity for success in this territory. Not only does this program promote energy savings, it also helps the customers enjoy a better home that's more comfortable and performs well. This also helps Duke avoid building another power plant by reducing the amount of power consumed by residential new construction. As a ratepayer and building industry professional, I cannot stress enough how much Duke Energy Progress' Residential New Construction Program has done to promote efficiency, save money, and reduce greenhouse gases in that territory. The incentive has produced quantifiable savings and our industry has seen firsthand more savings in the Progress territory, where the incentive has been in place for several years, versus the Carolinas territory where it is not available. As a Duke Energy customer who just purchased a new home in Kannapolis, from H&H builders. I was thrilled with the construction practices and level of energy efficiency. We have lived in the home for a year and enjoyed remarkable comfort and energy efficiency. When I learned that these new building practices and products are not being incentivized it was a real shock. I spoke at length with Mr. Marc Faircloth who took time to explain the situation around why the program is not available in the Charlotte/Greeneville/Spartanburg and Asheville areas. This seems to be a significant over-site on the part of NC Utilities commission that works against all that they preach about energy efficiency. Please take action to fix this so that Duke Energy customers can have the advantages of better builders, products and energy efficiency.
