As a ratepayer and building professional in Western North Carolina, I cannot stress enough how much DEP's Residential New Construction Program has done to promote efficiency, save money, and reduce greenhouse gases. The incentive has produced quantifiable savings, and we have seen firsthand more savings in the DEP territory versus DEC where the incentive has been in place for several years. Having the incentives available in DEC territory would be good for residents of our state. I am asking the Commission to weigh in on this matter and to direct DEC and the gas utilities to come up with a solution that will allow this incentive to be available for DEC customers. Thank you.

Please expand efficiency incentives as far and wide as possible. As a builder, every home I build is built to "NC Greenbuilt" standards and results in a substantially more efficient home. In this day and age, we need as many builders as possible to do the same. Whatever the metric for approving an incentive, it should aim to build out the most energy efficient housing stock that is economically feasible today. That will mean different things in different markets but it should be far and away better than the code-minimum construction that drives so many markets today. Thank you for considering this and other topics that help us build a soft energy path.

As a builder I have used the DEP's Residential New Construction Program on all of our last 5 houses and it is great for encouraging and enabling energy efficient upgrades. It really has helped make houses more efficient and efficiency is the lowest cost resource for lower cost and environmental impact of buildings. I urge you to support a Residential New Construction Incentive Program in the Duke Energy Carolina's territory. It is good for consumers, builders and all of us to have efficient buildings.

As residential "Green" home builders in WNC we've appreciated the incentives from Duke's other/past programs to build with energy efficiency in mind. We want the world to be a better healthier place and it provides us with some hope that a large corporation such as Duke is willing to provide assistance toward that end. We plan on utilizing the DEC incentive with every house we build. I am asking the Commission to weigh in on this matter and to direct DEC and the gas utilities to come up with a solution that will allow this incentive to be available for DEC customers. Thank you.

As a ratepayer and professional architect I cannot over-emphasize the positive impact of DPE new Construction Energy efficiency program. Please have the Utilities commission give this careful careful consideration. It's good policy from every perspective. Thank you, Steve Farrell Architect
