Subject: NC docket SP-100, Sub 31

Dear Commissioners:

Please grant the NC WARN petition in this docket to allow Third Party providers to develop solar projects in North Carolina. Your state has been rapidly moving ahead with PV but this restriction, long since rejected by other PV-friendly forward looking states, is a huge roadblock to further development of solar. The example in this case, a church which wants to move ahead with PV through favorable terms with a third party provider, is a perfect example of why a change in policy is needed. There has been no negative impact on utility companies in areas which allow third party solar sales and there have been thousands of additional jobs created where such a policy is in place.

Please grant the petition and eliminate this needless roadblock to more solar development.

Please contact me if you seek additional information from me on this matter.
