**Subject:** Docket E-100 sub 157 2018 Integrated Resource Plans

Dear NCUC,

Every two years, Duke is required to file a long-term Integrated Resource Plan that outlines how Duke plans to meet their customers' needs over the next 15 years. While this year's plan represents a step in the right direction, Duke is still moving too slow when it comes to retiring the remaining coal plants in the state.

Renewable energy technologies, like wind and solar power, are getting cheaper every year. The costs for battery storage have also dropped so fast that storage is now a viable option.

But rather than focusing on how to use those resources, and how to develop better energy efficiency and demand response programs, Duke plans to run dirty, uneconomic coal plants for more the next 30 years.

Relying on outdated coal plants that deliver power that costs twice as much as clean sources just doesn't make sense, and fails to meet the requirement to deliver electricity in the least cost manner.

Please reject Duke's long-term energy plan and require them to submit an actual least cost plan that focuses on energy efficiency, demand response and clean sources like wind and solar.

Sincerely,

Elizabeth Bonzo-Savage

Dear NCUC,

Many energy companies are embracing renewable energy because they know it is safer, healthier, and in the long run more economical. Hurricane Florence has highlighted some of the unsafe, environmentally risky practices, such as coal ash pits, that Duke has employed in the production of energy from coal. This needs to stop. Every two years, Duke is required to file a long-term Integrated Resource Plan that outlines how Duke plans to meet their customers' needs over the next 15 years. While this year's plan represents a step in the right direction, Duke is still moving too slow when it comes to retiring the remaining coal plants in the state.

**Subject:** Docket E-100 sub 157 2018 Integrated Resource Plans

Dear NCUC,

Every two years, Duke is required to file a long-term Integrated Resource Plan that outlines how Duke plans to meet their customers' needs over the next 15 years. While this year's plan represents a step in the right direction, Duke is still moving too slow when it comes to retiring the remaining coal plants in the state.

Renewable energy technologies, like wind and solar power, are getting cheaper every year. The costs for battery storage have also dropped so fast that storage is now a viable option.

But rather than focusing on how to use those resources, and how to develop better energy efficiency and demand response programs, Duke plans to run dirty, uneconomic coal plants for more the next 30 years.

Relying on outdated coal plants that deliver power that costs twice as much as clean sources just doesn't make sense, and fails to meet the requirement to deliver electricity in the least cost manner.

Please reject Duke's long-term energy plan and require them to submit an actual least cost plan that focuses on energy efficiency, demand response and clean sources like wind and solar.

Sincerely,

Olga Pader

**To:** Statements  
**Subject:** Docket E-100 sub 157 2018 Integrated Resource Plans

Dear NCUC,

Every two years, Duke is required to file a long-term Integrated Resource Plan that outlines how Duke plans to meet their customers' needs over the next 15 years. While this year's plan represents a step in the right direction, Duke is still moving too slow when it comes to retiring the remaining coal plants in the state.

Renewable energy technologies, like wind and solar power, are getting cheaper every year. The costs for battery storage have also dropped so fast that storage is now a viable option.

But rather than focusing on how to use those resources, and how to develop better energy efficiency and demand response programs, Duke plans to run dirty, uneconomic coal plants for more the next 30 years.

Relying on outdated coal plants that deliver power that costs twice as much as clean sources just doesn't make sense, and fails to meet the requirement to deliver electricity in the least cost manner.

Please reject Duke's long-term energy plan and require them to submit an actual least cost plan that focuses on energy efficiency, demand response and clean sources like wind and solar.

Sincerely,

Victor Savich

Dear NCUC,

Dear NC Util Commission. Why is NC stuck in the dark ages? Where are our alternative energy options? Why do you not force Duke to offer an alternative energy Rate plan allocating energy from Power produced in NC? Please push our utilities to go Coal free at least by 2030. And also to offer alternative locally produced power for those of us who can afford it. Thanks you!
